

 COOLON

CP66

320W LED Flood Light

High performing flood light designed specifically for lighting towers

The high lumen output and narrow beam optics of the CP66 allows a single tower to illuminate extremely large areas. The power supply unit can be positioned separately for easy maintenance.

Designed for use in:

- Lighting Towers
- Area Lighting
- Flood Lighting

Guaranteed performance & robust design

Robust design allows lighting towers to be safely transported over long distances on Australia's rough, corrugated, outback roads. The CP66 is reliably sealed against damaging water and ingress of dust, guaranteeing performance.

Built to last

Unlike conventional LED floodlights, the CP66 was designed to withstand constant abuse.

- Resistant to Vibration, Impact & Shock Proof
- Chemical Resistant
- High Pressure Washable
- Unaffected by Severe Temperature Variations

COOL SURFACE TEMPERATURE

Coolon's Industrial LED fittings have a much lower surface temperature than traditional HID equivalents which prevents dirt from baking onto the luminaire. This allows for easier cleaning and will prolong the lifespan of the luminaire.

INSTANT ON/OFF

LEDs do not require warm up. Instant on to 100% output translates to no downtime, improved safety and the ability to utilize sensor switching to significantly save energy.

NO FLICKERING

LED luminaires run on constant low voltage DC power and do not produce any visible stroboscopic effects, thus reducing the strain on eyes and significantly improving safety in areas where moving machinery is present.

IP66

HIGH IP RATING - IP66

Coolon's Industrial LEDs are designed specifically to withstand the harsh conditions in mining environments. The robust design allows our LED products to be used in many different applications and are high pressure washable.

UNRESTRICTED BURNING POSITION

Coolon's LED luminaires can be positioned and oriented in any desired way without affecting the lifespan of the product. This gives greater flexibility when it comes to aiming angles and orientation.

EXTRA LOW VOLTAGE OPERATION

Our products operate on extra low voltage DC power. It is substantially safer to work with than conventional mains powered light sources.

¹ Optical and electrical characteristics are measured using Cool White LEDs (CWT)

² Note: At 230VAC input, 25°C cold start, 10%lpk-10%lpk.

³ Reading taken while test unit operating in steady state. Ambient temperature during testing is typically 25°C. Individual unit behaviour may differ due to electronic component tolerance and ambient conditions. Product parameters and application suitability shall be checked by the user prior to commissioning.

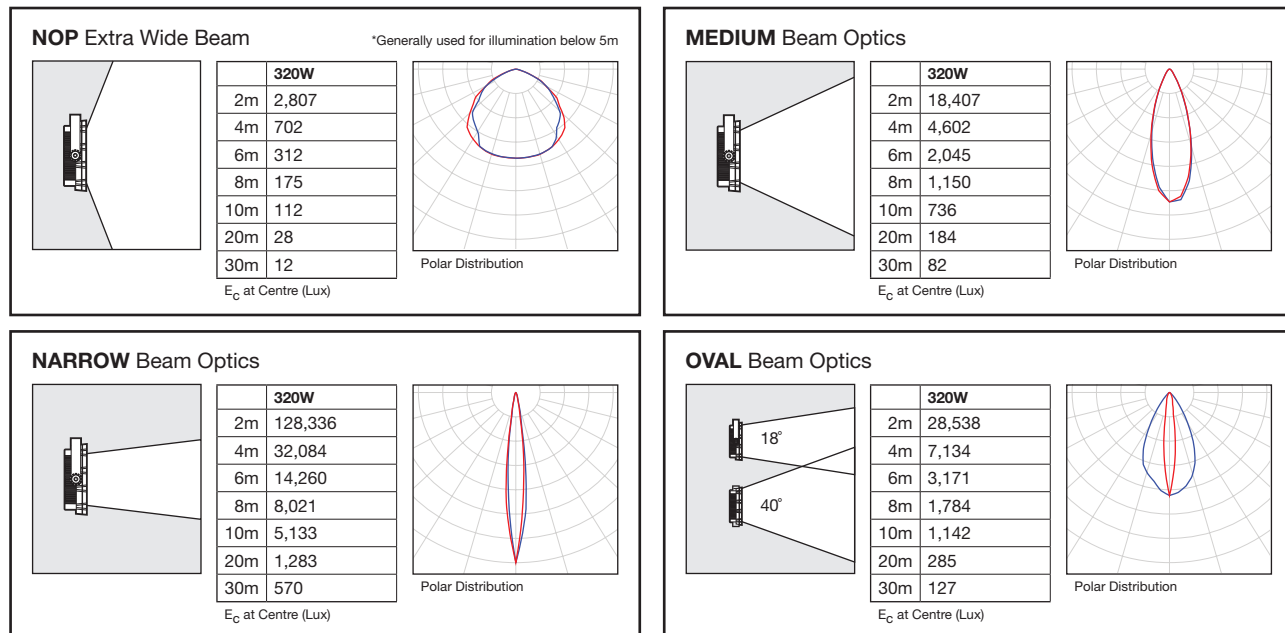

⁴ Number of luminaires is subject to relative MCB properties, assuming a 30mA leakage current limit and MCB steady state current load not exceeding 60%, 70% and 80% for the B, C, D type MCB respectively.
